Stage 6: Final project

Authors:

Agnieszka Jędrzejak, 71754
Anna Biausque, 71935
Francisco Silva, 67548
Stanisław Pietryga, 71861

Lab class Nº P4

Group Nº 27

Professora: Teresa Romão

1. Pointed out issues

1) Problem: When adding an image, there is no confirmation that one was added/ selected successfully (indicated in the group's report)

   Solution: Upon selecting an image from the file system, it should appear in the screen somewhere to give direction to the user that the image was correctly given

   Agree with problem and solution

2) Problem: When adding the skills a student needs for the project, it's not possible to remove one that was previously added (indicated in the group's report)

   Solution: The users should be allowed to add/remove skills at will, especially since an 'x' is given, just not implemented

   Agree with problem and solution

3) Problem: When joining a project, a student is allowed to join more than once and the interface doesn't give feedback on it

   Solution: The interface should warn the user/student that they are already on the project they're trying to join, even if this doesn't create other errors.

   Agree with problem and solution: student is not added to the project twice, the project is not duplicated in a list in project view, however the student is not stopped by entering the form about looking for the group even when he is already in the group

4) Problem: When sending an email to the members of a group, nothing happens.

   Solution: The system must either tell the user that an email has been sent or maybe a prompt for the text's body should be added to give the user control over what is sent

   Agree : that's an issue we tried to solve last minute because we forgot to make the buttons.

5) Problem: The 'i' button on the 'Find a group' page seemingly does nothing

   Solution: The system doesn't tell the user if the button has any functionality or what its purpose is.

Disagree : the "i" button is an anchor to the information about the group. It's mainly useful when using the mobile version, because it's not possible to both scroll.

Our solution : we should replace the "i" button with something else (maybe an arrow that points down ?) to make it more explicit.

6) Problem: The bell icon on the top navigation bar seemingly does nothing

Solution: The system doesn't tell the user if the button has any functionality or what its purpose is.

Agree with problem and solution

2. Our corrections after the Stage 5:

Issue 1 : When adding an image, there is no confirmation that one was added/ selected successfully (indicated in the group's report)

Correction : display of added files with possibility to delete them

Issue 2 : When adding the skills a student needs for the project, it's not possible to remove one that was previously added (indicated in the group's report)

Correction : it's now possible to delete a skill

Issue 3: When joining a project, a student is allowed to fill the form about skills even if he is already assigned to the project

Correction: If a student wants to join the project in which he already participates, he cannot fill the form about his skills again and there is information displayed that he already joined this project.

Issue 4 : When sending an email to the members of a group, nothing happens.

Correction : a dropdown menu appears with the email address of the group member.

Issue 5 : The 'i' button on the 'Find a group' page seemingly does nothing

Correction : "i" button was replaced with an arrow pointing downwards

Issue 6 : The bell icon on the top navigation bar seemingly does nothing

Correction : bell icon was deleted
